

WOODGERMANY

Innovative wood construction and modern timber products offered to the Gulf region by the German wood industry

By: **Dr. Thorsten Mrosek (CEO)**

In the Gulf region, great demands are placed on modern building structures and materials. Architects, building planners as well as decision-makers in the real estate sector and project development are particularly appreciative of the fact that contemporary wood construction and high-quality refined timber products are able to meet the highest demands for technical performance, profitability, energy efficiency, aesthetics and sustainability.

Since the German wood industry is among the global market, technology and innovation leaders, services related to wood construction and timber products from Germany continue to be in high demand in the Gulf region. German design solutions that are particularly sought after in this region include sophisticated and energy-efficient residential buildings, modern industrial and commercial buildings, as well as representative commercial and public buildings with aesthetically attractive roof structures. In addition to technically dried sawn timber and planed products, imported modern solid timber products also include refined building materials such as solid construction timber (KVH®), balcony glulam (DUO®/TRIO® beams), glued laminated timber (Glulam) and cross laminated timber, in particular (more information: www.kvh.de and www.brettschichtholz.de).
