

Press Release

July 2012

Bridge specialist Schaffitzel + Miebach joins WOOD GERMANY

The marketing platform WOOD GERMANY welcomes another innovative and globally active timber engineering company - Schaffitzel + Miebach – Faszination Brücken GmbH.

Innovative concepts and design solutions - the company develops, designs and implements unique building structures with its own internal statics and design office. Schaffitzel+Miebach specialises design engineering, project planning and the implementation of wood bridge structures - an area in which the company is the European leader. With innovations such as wood-concrete composite construction and quality standards, the company does its part in promoting modern wood bridge construction.

The sophisticated designs are constructed using high-end glued laminated timber – as standard with spruce, as a modern variation with beech and as a visionary version with Accoya. The timber construction projects are implemented internationally in close coordination with clients and builders, highly flexible and with strict adherence to schedules. For more than 100 years, customers benefit from the expertise of Schaffitzel + Miebach's specialists and engineers.

WOOD GERMANY is the new international B2B marketing platform of the German timber industry. Additional important export-oriented companies and institutions of the German timber and forestry industry will be presented at WOOD GERMANY in the future.

The German timber industry is a global market leader known for high-quality and innovative products and services. German timber products are derived from sustainable forestry management that has been successfully practiced in Germany for 300 years. Germany is home to Europe's largest timber reserves.
